

CAO

Lo 1

6/4/2026

No	Abbreviation	Function
CPU	Central Processing unit.	Executes all arithmetic and logical instructions, and controls the other components of the computer.
I/O	Input/output unit	Moves data between the computer and its external environment « keyboard, monitor, printer »
ALU	Arithmetic and Logic unit	Performs all arithmetic « addition, subtraction » and logical « AND, OR » operations inside the CPU.

No	Abbreviation	Function
CU	Control Unit	Directs the operation of the CPU and coordinates how data moves between the CPU, memory, and I/O devices.
IC	Integrated circuit	A miniature electronic circuit containing thousands to billions of components «transistors, resistors» on a single chip, used in CPUs, RAM, and other computer parts.
MM	Main Memory	Stores data and instructions that the CPU is currently using, it is volatile «loses data when power is off».

No	Abbreviation	Function
RAM	Random Access Memory	Allows the CPU to read and write data quickly at any memory location, it is volatile and used for temporary storage while programs are running.
ROM	Read only Memory	Permanently stores data that can't be modified.
BIOS	Basic Input/output system	Initializes hardware and boots the OS .
